SUMMARY

Software Engineer with 6+ years crafting high-performance React applications and full-stack systems. Builds fast, thinks in systems, and uses AI tooling to move faster without cutting corners.

TECHNICAL SKILLS

Languages: JavaScript, TypeScript, Python, SQL, C, C++

Frontend: React.js, React Native, Next.js, HTML5, CSS3, ES6+, Redux, ShadCN, Chakra UI, Material UI

Backend & Cloud: Node.js, Express.js, REST APIs, AWS, GCP, Firebase, MongoDB, DynamoDB, MySQL, Snowflake, BigQuery, CI/CD

AI Tools: Cursor, Claude, Kiro, Codex, Lovable, Windsurf, GitHub Copilot, Hugging Face

EXPERIENCE

Rocket Companies

Jan 2025 – Present

Software Engineer

Los Angeles, CA

- Built agentic development workflows using Figma MCP, Kiro, and Claude to auto-generate React components, unit tests, and Storybook stories — reducing component build time from ~1 day to minutes.
- Developed GitLab MR review agents and CI/CD automation agents to analyze code changes and autonomously generate pipelines for new repositories.
- Scaled mortgage and non-mortgage marketplace platforms to nearly \$500K in monthly revenue through SEO, affiliate marketing, and conversion-optimized user funnels.
- Improved Core Web Vitals (LCP, CLS) through performance optimizations and rendering strategies, achieving a 300% increase in performance scores.
- Reduced security vulnerabilities by 30% by implementing frontend security best practices and integrating automated scanning tools into the CI/CD workflow.
- Built and maintained reusable React.js component libraries and data-intensive UI flows — search, filters, pagination, forms — collaborating on API contracts for scalable frontend integration.

Great Software Laboratory

Aug 2018 – Jul 2022

Software Engineer

Pune, India

- Led frontend development for multiple React-based enterprise applications, establishing reusable component libraries that improved UI consistency and user engagement by 25%.
- Built responsive, ad-integrated web experiences that drove a 50% increase in click-through rates across client-facing products.
- Optimized frontend performance and data processing pipelines, reducing application response time by 30%.

EDUCATION

California State University, San Bernardino

Aug 2022 – May 2024

M.S., Computer Science — GPA: 3.72 / 4.0

San Bernardino, CA

Built a Firebase + React.js chatbot evaluation panel as part of a digital transformation initiative, reducing assessment time by 30%.

Chitkara University, Himachal Pradesh, India

Aug 2015 – Jul 2019

B.E., Computer Science — GPA: 3.50 / 4.0

Himachal Pradesh, India

PROJECTS

Signalist — Automated Stock Market Insights Platform

Dec 2025 – Jan 2026

- Built a real-time stock market platform using React.js and TradingView charts, with event-driven background automation via Inngest for scheduled data processing, market monitoring, and triggered alerts.
- Engineered an AI-powered daily market digest pipeline using the OpenAI API to aggregate and summarize financial news into plain-English insights, delivered automatically to subscribers via styled HTML emails.

Stock-bot — Automated Stock Screening & Alerts Engine

- Built a Python stock screening engine scoring S&P 500 and Nasdaq 100 tickers across 4 signal modules — technical (RSI, MACD), fundamental (P/E, EPS), momentum, and sentiment (NLTK VADER) — with a composite 100-point scoring system filtering large-cap stocks ($\geq \$100B$ market cap).
- Automated daily runs via GitHub Actions, delivering top-scored picks through Discord webhooks and styled HTML email reports, with full results logged to timestamped CSV files.
